SPIRE-EIT
VRAC/HCI Summer REU Program
Faculty/Mentor Post Questionnaire

- Please rate students' **level of preparation** for the course in the following areas [low, average, high]:
    - Computer modeling

    - Computer programming

    - Interface design

    - Content understanding

- In what ways were students under prepared? How would you address this in the future?

- Out of the 15 students, how many needed special assistance?

- Please comment on any changes in students' knowledge/ability resulting from the course.

- In order to recruit students who would be successful in this program, what recommendations would you make?

- Do you suggest any changes to the course in the future?

For each student, can you offer any comments that would help Stephen write a recommendation for the student (or say you wouldn't recommend), e.g. a story of a challenge the student overcame, or an overall rating of "this student was in the top 10 undergrads I've ever known" etc. ?

[Below we put a series of student photos and their names with white space so that mentors and faculty could comment on people they didn't remember the names of.]
